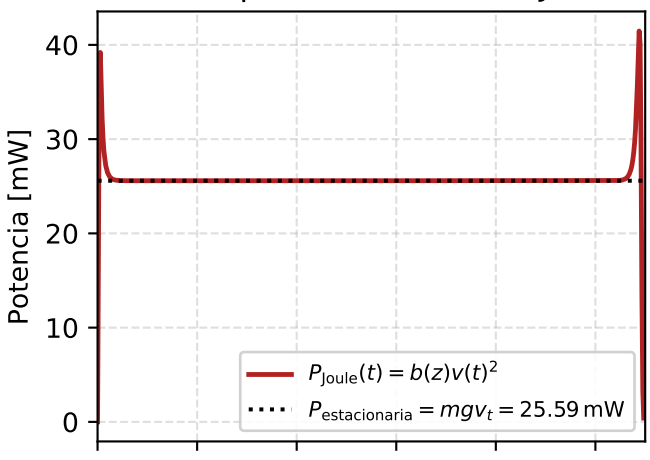
(a) Conservación de la Energía (Cobre)
Energía [mJ]
Tiempo t [s]
E_{pot} Gravitacional
E_{Joule} Disipada
E_{cin} Cinética
E_{total} Conservada



(b) Disipación Térmica de Joule
Potencia [mW]
Tiempo t [s]
$P_{\text{Joule}}(t) = b(z)v(t)^2$
$P_{\text{estacionaria}} = mgv_t = 25.59\,\text{mW}$
